Claims 1-4 of the present invention relate to a method of providing an arbitrary sound as an RBT(Ring Back Tone) in a communication network, comprising:

a first step, conducted by an HLR(Home Location Register's), of furnishing a call-originating exchanger with information on whether or not an RBT is to be replaced for a terminal through a response message to a location request message received from the call-originating exchanger that sends the location request message to the HLR when a call connection is requested to the terminal; and a second step, conducted by the call-originating exchanger, of searching for a sound code assigned to the terminal based on the information included in the response message, and providing a caller with a pre-stored RBT-replacing sound associated with the found sound code as an RBT while making a trunk connection to a call-terminating exchanger based on the response message.

D1-D9 do not include the features of claims 1-4.

Hence, the subject-matter of Claims 1-4 is novel and inventive according to PCT Article 33(2) and (3).

The industrial applicability of Claims 1-4 is self-evident in the sense of Article 33(4) PCT.
